Preface/foreword	7
Introduction	10
Chapter 1. Mechanical properties of rocks and arrays	18
1.1. The genesis (origin), composition and structure of rocks.....	19
1.2. Jointing and fracturing of rock mass.....	26
1.3. Rock classification	30
1.3.1. Rock classification concerning internal links.....	30
1.3.2. Rock classification by M.M.Protodyakonov.....	33
1.4. Elasticity, brittleness and plasticity of rocks.....	36
1.5. Deformation and strength characteristics of rocks.....	39
1.5.1 Rock deformation characteristics	39
1.5.2 Strength characteristics of rocks.....	43
1.6. Post-peak rock failure	53
1.7. Scale effect in rocks.....	58
1.8. Rheological properties of rocks.....	62
1.9. The concept of heredity creep theory	74
1.10. Determination of rock mechanical properties in situ.....	78
1.11. Statistical analysis of the measurement results	80
Biographical information.....	81
Check questions and tasks.....	84
Chapter 2. Basic relations of continuum mechanics deformable body	86
2.1. Rock mass elementary volume	87
2.2. Stress-state of the rock mass.....	90
2.3. Types of stress state.....	100
2.4. Differential equilibrium equations.....	102
2.5. Boundary conditions.....	105
2.6. Compatibility equation.....	107
Biographical information.....	108
Check questions and tasks.....	109
Chapter 3. Rock destruction under confine stress state	110
3.1. Development of the concepts concerning a solid body destruction	111
3.2. Theory of rock failure under confine stress state	121
3.3. Empirical Hoek-Brown criterion.....	127
3.4. Rock testing under confine stress state.....	128
Biographical information.....	133
Check questions and tasks.....	135
Chapter 4. Rock mass stress-strain state around a single horizontal excavation	136
4.1. Initial stress state of interlocked rock mass.....	137
4.2. Initial stress state of granular rock mass.....	141
4.3. Stress distribution around a horizontal excavation (elastic problem).....	143

4.4.	Stress distribution around a horizontal excavation (elastic-plastic problem)....	155
	Biographical information.....	160
	Check questions and tasks.....	160
	Chapter 5. Numerical methods in geomechanics	162
5.1.	Finite element method.....	164
5.2.	Boundary element method	178
5.3.	Distinct element method.....	187
	Check questions and tasks.....	193
	Chapter 6. Support pressure determination in case of horizontal excavation	195
6.1.	Hypothesis of creating the natural equilibrium arch.....	197
6.2.	Hypothesis of rock mass and support interaction	202
6.3.	Hypothesis of creating the equilibrium arch under conditions of rock mass and support interaction	205
	Check questions and tasks.....	212
	Chapter 7. Determination of support pressure in case of vertical shaft	213
7.1.	Methods based on the theory of retaining wall calculation.....	214
7.2.	Methods based on the hypothesis of shaft lining and rock interacting.....	217
7.3.	Empirical methods of determining the support pressure	219
7.4.	Numerical simulation of the rock stress-strain state around a vertical shaft.....	221
	Biographical information.....	223
	Check questions and tasks.....	224
	Chapter 8. Floor heaving in underground excavation	225
8.1.	Lining pressure provided by the excavation floor heaving	226
8.2.	The rheological methods of floor having evaluation	229
8.3.	Elastic-plastic stability of the rock mass around of a single excavation.....	232
8.4.	Empirical methods of floor heaving predicting	236
8.5.	Numerical simulation of an excavation floor heaving.....	238
	Biographical information.....	243
	Check questions and tasks.....	244
	Chapter 9. Rock pressure dynamic manifestations	245
9.1.	Sudden outbursts of coal, gas and rock in the underground excavations.....	247
9.2.	Physical and structural characteristics of “Coal-Methane” system.....	251
9.3.	Hypotheses of gas-dynamic phenomena.....	252
9.4.	Factors affecting the gas-dynamic phenomena manifestation.....	256
9.5.	The phenomena displaying a possibility of sudden gas and rock outburst.....	259
9.6.	Prediction of gas-dynamic phenomena.....	262
9.7.	Methods of preventing and forecasting the gas-dynamic phenomena.....	266
	9.7.1. Gas-dynamic phenomena forecast.....	266
9.8.	Rock burst.....	269
	Biographical information.....	281
	Check questions and tasks.....	281
	Chapter 10. Stress-strain state of the rock mass around a mined-out space (a stope)	283
10.1.	Features of rock pressure manifestations while mineral extraction.....	284

10.2.	Hypotheses of rock pressure concerning the mining excavation (stope).....	289
10.3.	The basic principles of rock pressure control.....	312
10.4.	Numerical simulations of geomechanical processes around a face.....	314
	Check questions and tasks.....	319
	Chapter 11. Room-and-pillar stability	321
11.1.	General information.....	322
11.2.	Geomechanical analysis of a “room-pillar” system.....	324
11.3.	The calculation of the allowable width of interchamber pillars.....	328
11.4.	Limit dimension of a chamber.....	332
11.5.	Numerical simulations of coal pillar stress-strain.....	342
	11.5.1. Justification of the object physical model and numerical simulation methods	342
	11.5.2. Analysis of the numerical simulation results	345
	Biographical information.....	349
	Check questions and tasks.....	349
	Chapter 12. General features of rock mass displacement at underground mining	351
12.1.	The main parameters and terms	352
12.2.	Zones of rock displacement	358
12.3.	Factors influencing the displacement process	361
12.4.	The mathematical description of the displacement process	363
12.5.	Forecasting the expected displacement surface provided by a single excavation.....	368
12.6.	Calculation of surface displacements	373
12.7.	Gas pressure distribution in zones of rock displacements.....	377
	Check questions and tasks.....	380
	Chapter 13. Bench and pit stability	381
13.1.	Fundamentals of slope stability estimation methods.....	382
13.2.	Methods based on the hypothesis of a flat sliding surface.....	388
13.3.	Methods based on hypothesis of a curved sliding surface.....	389
13.4.	Numerical modeling the stability of pit walls and piles.....	394
	Check questions and tasks.....	398
	Chapter 14. Geomechanical processes modeling	399
14.1.	General information.....	400
14.2.	Fundamentals of the similarity theory.....	403
14.3.	Equivalent material method.....	407
14.4.	Centrifugal modeling.....	412
14.5.	Polarization-optical modeling.....	415
14.6.	Other modeling techniques.....	422
	Biographical information.....	424
	Check questions and tasks.....	424
	Chapter 15. Instrumental methods of the rock mass studying	426
15.1.	Strain and stress measurement at the openings.....	427
15.2.	Strain and stress measurement inside of the rock mass.....	431
15.3.	Displacement measurement in the vicinity of underground excavation.....	435

15.3.1. The observation stations with contour bench mark	435
15.3.2. The observation stations with tell-tales.....	436
15.3.3. Roof displacement sensor	439
15.4. Support pressure measurement.....	442
15.4.1. Direct methods of measuring the load on the supports.....	442
15.4.2. Indirect methods of measuring the load on the supports.....	448
15.5. Complex index of underground mining stability	453
15.6. Evaluation of rock structural defects with tomography methods	456
15.7. Monitoring the rock state around the underground construction with ground-penetrating radar (GPR).....	459
15.8. Studying the rock mass displacements at underground mining.....	466
15.9. Monitoring the rock mass sliding in the open pit mines.....	469
15.10. Landslide protection in the open pit mines.....	474
15.11. Surface and underground laser scanning.....	478
15.12 The automated system of geomechanical monitoring.....	484
Biographical information.....	490
Check questions and tasks.....	490
Conclusion	492
